Education

California Polytechnic State University, San Luis Obispo

Bachelor of Science in **Computer Science**, EXPECTED MAY 2028

GPA: **3.79**

Technical Projects

Construction Technology Innovation Competition (AR Safety Visor)

Jan - May 2026

- Partnered with IronsiteAI in a team-based engineering competition to design a technology solution for improving safety and efficiency on construction job sites
- Lead the software engineering team in developing a communication system delivering real-time tasks, alerts, and safety updates through an AR display
- Developed Bluetooth-based communication between a mobile application and wearable visor hardware using a Raspberry Pi as the communication interface
- Implemented direct messaging features to enable real-time communication between workers and managers in the field
- Collaborated with hardware and electrical engineers to integrate software with microcontrollers, sensors, and wearable display technology

Dog Discovery (Full-Stack Web Application)

Feb - June 2026

- Developed a full-stack web platform that connects dog owners with prospective adopters through a searchable listing system
- Built a responsive frontend using React to enable users to browse, filter, and view detailed dog profiles
- Designed and implemented APIs with Node.js to handle user authentication, listings, and messaging functionality
- Created and managed a relational SQL database to store user data, dog profiles, and adoption records
- Implemented features such as filters, image uploads, and real-time updates

Virtual World Simulation Game

April - June 2025

- Built an interactive 2D world with houses, terrain tiles, dynamic bridge placement, etc.
- Implemented mouse-based spawning system that generates entities on clicks
- Programmed character behaviors including house destruction, target-chasing, and creature conversion mechanics
- Designed grid-based pathfinding with movement and obstacle avoidance

Skills

Languages: Python, Java, JavaScript, Assembly, C/C++, Swift

Technologies: React, Node.js, Git, GitHub, Linux, HTML, CSS

Concepts: APIs, Databases (SQL/NoSQL), Cloud (AWS/GCP), Web Development

Relevant Coursework

Design and Analysis of Algorithms • Intro to Software Engineering • Data Structures • Intro to Computer Organization • Project-Based Object Oriented Programming • Intro to Computer Security
• Fundamentals of Computer Science • Systems Programming • Linux System Administration
